The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AGAAGGTGTTGCTTTACAACTATGAATATGGGCTCATGAGATGTACACTACAGATAAGCG

New transgenic plant cell, useful in producing plants with altered size and stature and with normal and healthy root growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          3352
                                                                                                                                                ó
                  ä
which is responsible for many red and blue colours in plants. The polynucleotide is useful for modifying e.g. leaf colour, flower colour fruit colour in plants. The present sequence represents the plasmid pAG3202 which is used in an example from the present invention for the generation of plants with an ANTI phenotype by transformation with an activation tagging construct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TCTTTTCCACGATGTTCCTCGTGGGTGGGGTCCATCTTTGGGACCACTGTCGGTAGAG

16246 16426 16186 .. 0 7316 7376 The invention comprises a plant gene activation vector that contains a hairy-root induction gene and enhancer and/or promoter which can function in a plant. The vector of the invention is useful for analyzing a plant gene. The present DNA sequence is claimed in the invention. activation vector-related DNA sequence pHR-AT-GFP - SEQ ID 14. Novel plant gene active vector comprising hairy-root induction gene, and enhancer and/or promoter that functions in plant, useful for activating plant gene forming hairy root. The present sequence is that of a 4X cauliflower mosaic virus (CaMV) 35S enhancer sequence preferred for use in the method of the invention. It includes 4 repeats of 202 bp AluI-EcoRV fragments of the 35S enhancer, and an additional 7 bp repeated sequence, which does not appear in the 35S enhancer region of the native CaMV genome. This 4X CaMV 35S enhancer can be used in a method for identifying genes associated with a Gelement can be used in a method for identifying genes associated with a desired trait in a fruit-bearing plant. The method involves: transforming plant cells with an activation tagging vector comprising an element which into the plant genes as selecting transformed plant cells, regenerating catering plant genes, selecting transformed plant cells, regenerating catering plants and characterizing the contribution of which has been enhanced, and confirming the contribution of the modified expression of each identified gene to the desired trait. The modified septence of the desired trait may be increased resistance to the desired trait. The modified seed number, plants, insects, modified leaf number, leaf pigmentation and shape, modified leaf number. Leaf pigmentation of confirming second resistance to the desired trait. The desired trait may endified seed number, pattern or distribution of leaves and flowers, modified seed number, pattern or distribution of leaves and clowers, modified seed number, pattern or distribution of leaves and clowers, modified seed number, pattern or distribution of leaves and clowers, modified seed number, pattern or distribution of leaves and clowers, modified seem length between nodes, root mass or root development characteristics or increased drought, salt and antibiotic commission by what wariation at increased drought, salt and antibiotic commission by what wariation at the cycles are transformed, as
                                                                                                 not associated with 35S enhancer"
                                                                                                                                                                                                                                                                                                                                                            enhancer"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying genes associated with a desired trait for isolating and characterizing the genes comprises using an enhancer element which enhances gene expression and stably integrates into the plant genome.
                                                                                                                                                                                                                                                                                                                                                          not associated with 35S

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   size
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 CTTGTCATGCGAGTTATTGCTGAGGAAGATCAAACCATGCAGCTATATCCAAAGGCTAAT 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                              New transgenic plant cell, useful in producing plants with altered size and stature and with normal and healthy root growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5117 TAAGTACTCAGCACTACTCTTCATGATTCTTTTGTTGGTGGGGGGTGTACATTGGTG

New transgenic plant cell, useful in producing plants with altered size and stature and with normal and healthy root growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.
                                                                                                                                                                                                                                             TITITGLCTCCGACCAATGTTTCAAACTCGAATCCTTTCGTTAAAAGTTGTTTCTGCTTTA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     900
                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                               size
                                                                                                                                                             The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GATTICAATTITIGE

The invention relates to a number of isolated Arabidopsis thaliana CDNA sequences and their encoded proteins which are especially transcription factor bothA's and proteins. The isolated or recombinant plant transcription factor polymucleotides and polypeptides are useful in producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, such as an alteration in a plant growth characteristic, e.g. growth rate, germination rate of seeds, vigor of plants and seedlings, or leaf and flower senescence. Sequence information related to the polymucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the CDNAs of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New plant transcription factor polynucleotides and polypeptides, useful in producing transgenic plants with commercially valuable properties, such as an alteration in a plant growth characteristic, e.g. growth rate

The invention describes a transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences fully defined in the specification or its complement. The method of the complement of the complement. The method of the chancin can be used to produced a plant having altered traits such as: enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensing; early or late flowering; altered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance; reduced trichome density; lack of trichomes; reduced ectopic trichome development; altered trichome of trichomes; reduced root prowth; increased root development; altered seed development; altered cell proliferation or cell differentiation; rapid development; altered cell proliferation or cell differentiation; rapid development; contensed plant size; leaf morphology; seed morphology; seed biochemistry; increase in root anthocyanins; increase in plant size; decreased plant size; leaf morphology; seed contoyanins, or alteration in light response or shade avoidance. The transgenic plant, polynucleotides and polypeptides are useful in bioinformatic search methods. This sequence represents a plant transcription factor related polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4351

                                                                                                                                                                                                                                                                    9
transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AGTACTTCATCACTTACTTCTCGCCCAAGTTACTCAAACCCTAGCAAGTTTCATAGCTAC

Production method of a large amount of biologically active interleukin-12 protein using plant cell suspension culture cheaply and safely.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A production method of biologically active interleukin-12 protein using plant cell suspension culture is provided, thereby cheaply and safely producing a large quantity of biologically active interleukin-12 protein. The production method of biologically active interleukin-12 protein comprises the steps of: (a) providing a transgenic plant having a gene encoding p35 subunit of interleukin-12(11-12) and a transgenic plant having a gene encoding p40 subunit of interleukin-12(11-12); (b) crossbreeding the p35 containing transgenic plant with the p40 containing transgenic plant expressing both p35 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    interleukin-12; transgenic plant; Nicotiana tabacum; T-DNA; pMYL28; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence shows the nucleotide sequence for the plasmid designated pH11406. The plasmid vector contains the gene for MCDV (maize chlorotic dwarf virus) coat protein 3 placed under control of tandem cauliflower modaic virus 35S promoters isolated from the 1841 strain of the virus, and a polyA signal sequence obtained from the potato proteinase inhibitor [I] (Pin II) gene that exhibits enhancer-like activity. The chimeric gene also includes a 79 bp sequence omega' from the 5' leader region of tobacco mosaic virus that functions as a translational enhancer; and a zea mays alcohol dehydrogenase 1, intron 1 fragment spanning nucleotides [19-67, trimmed to 557 bp with Bal 31 nuclease, which has been shown to function as an enhancer of gene expression in monocots. The DNA is used for imparting resistance to MCDV or viruses to which MCDV infection or resistance provides cross-resistance, including maize dwarf mosaic virus resistance protection for plants. MCDV has a single, long RNA core used to provide protection for plants. MCDV has a single, long RNA core used to provide protection for plants. MCDV has a single, long RNA core which is shown in AAQ74694. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 6927
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7107

p40; (c) isolating calluses of the transgenic plant of step (b) to produce a plant cell line(KCTC 1021BP); and (d) suspension culturing the plant cell line(KCTC 1021BP) to express the biologically active interleukin-12, wherein the plant is Nicotiana tabacum; gelatin may be further added into the medium in step (d) for improving production of IL-12; and the IL-12 contains a signal peptide. The present sequence represents T-DNA region of pWKL28.

November 2005

Published Applications Nucleic Acid and Published Applications Amino Acid database searches now generate two sets of results each. The Published Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published_Applications_New databases; older published applications make up the Published_Applications_Main databases.

Searches run against Nucleic Acid Published Applications produce two sets of results, with the extensions rnpbm (Published Applications NA Main) and rnpbm (Published Applications NA New). Searches run against Amino Acid Published Applications produce two sets of results, with the extensions raphm (Published Applications AA New).
